GLADIOLUS

FALL AND SPRING

GREETINGS!

Best wishes for the year 1949 to all our "glad friends!" We hope, that in spite of the upset of the season, your garden was at its best.

Here in New England, our spring was so cold and rainy that plantings were all off schedule. Consequently, our flowers were late in blossoming and our show schedule was upset completely, after the middle of August.

We did attend four of the shows however, out of the seven we had planned on, and enjoyed meeting so many of our customers. There certainly is a bond between gladiolus enthusiasts and it is always a pleasure to exchange experiences and ideas.

Your letters, bringing questions, expressing enthusiasm and appreciation, are always welcome. And too,—if there are troubles—let us help you.

Flying Cloud Farms is grateful for your continued confidence and we also would appreciate any suggestions or information with which you could help us to improve gladiolus and their culture.

Mrs. Winsor and Mrs. Moseley

GLAD "TIPS"

In spite of the fact that our own special trial garden was too late for some of the shows, it gave us much pleasure in the field. Many of the newer varieties were grown in larger quantities and, while some slipped back, most of them stayed up in the top class.

Mr. Stephen Chase is offering a very outstanding group of varieties which we are enthusiastic about: AGATHA, ATALA, CANOPUS, DAPHNE, DEBUTANTE, NUBIA, NUGGET, ORION, SPINDRIFT, and TRIUMPH and they cover quite a color range.

Errey Brothers, from Australia, never disappoint us and, as we have grown them a couple of seasons, we are very enthusiastic about: SINCERITY, MAUVINA, RIALGAR, WHITE WINGS, SUNKIST and FORMIDABLE. BERNADINE, MOONGLO, and PEACH PETAL are very lovely. STORM KING, DESERT SANDS, and MY DELIGHT are novelties, and the rich dark color of MRS. R. G. ERREY is perfect.

It is difficult to pick and choose for there are so many fine glads appearing in the gardens and at the shows. EVANGELINE, for instance, - such a beautiful ruffled light pink, and PHANTOM BEAUTY, - certainly rightfully named.

Then there were three very fine "Ladies":- ANNE, a pure rich white; JANE, a pleasing light yellow; and MARIAN, a lovely light lavender rose.

OCTOBER SUNSHINE you will like, - everyone does - and it is a pleasing blend of autumn shades. Everyone too will want to grow FLORENCE NIGHTINGALE, a beautiful cream white.

The growers from Holland have sent us some worthwhile additions to our trial patch. BELLE JAUNE promises to be a help in the yellow class. J. V. KONYNENBURG, ATLANTIC, and TIVOLI have outgrown the trial stage and they are well worth growing in larger quantities. BEERSHEBA, BERNARD SHAW, PACTOLUS, and NOVA ZEMBLA we were pleased with. URSUS and XENO are perhaps not as well known but merit a place in your garden. ROOSEVELT'S MEMORY and GENERAL EISENHOWER, of Salman's are pleasing in color and strong in growth.

Of all the so-called "blues," Snyder's BLUE LAGOON seems the strongest and truest.

PATRICIAN and EGLANTINE are refined and beautiful and, although the latter is a slow propagator, it is well worth your efforts.

We are growing quite a group of varieties from New Zealand: FESTIVAL QUEEN, BLENHEIM, CAIRO, HILLCREST, EVENING BELLS, CREAM DELIGHT, ORANGE-ADE, and G. K. GILLIAM, - all quite different and each one pleasing.

Mr. Alexander Barth, from Mainz-Zahlbach, has sent us GEORG BARTH and we believe you will like it.

The number of "novelties", "smokies" or "any other color", appears to be growing in popularity, such as: SURPRISE, DUSTY MILLER, PARTY DRESS, CHIEFTAIN, and those previously mentioned from the foreign growers.

So many people seem interested in the smaller varieties and we found the ATOM so popular that we bring to your attention: Mr. Cassebeer's ORANGETOWN, also FILIGREE, PERI, and SILVERSIDES of Prof. Kuhn's.

Our stocks of some of the newer glads are too scant to list this year, - and too, there are some we prefer to try in a different soil. Next year we will plant in an entirely different location and, as we have found from previous experience, the varieties on the border line may astonish us.

We hope you will discover items of interest in our catalogue and always remember,—our desire is to help you grow better glads and more of them!

GLADIOLUS CULTURE

Select a sunny location to plant your glads, away from trees or shrubs which will take up the food and moisture intended for the gladiolus.

Soil makes a great deal of difference of course. If a heavy clay soil, do not plant as deeply as in a light sandy soil. Plant large bulbs about six inches deep in light soil; medium size four inches, and small bulbs three inches. For increase in bulblets, plant as close to the surface as possible. Light soils usually give more bulblets than heavy soils.

Your first planting can be about the time farmers plant potatoes in your locality and your last planting should be about 120 days before your usual first frost. We make three plantings, three or four weeks apart, to insure a long blooming period, and suggest, in southeastern New England, April 6 to 15 — May 10 or thereabouts — and June 1 to 20.

Either spade or plough (depending on the size of the garden) the soil deeply, preferably in the fall, leaving it rough during the winter. If stable manure is used, put it on before spading and it will be well rotted by spring.

We prefer planting in double rows in a trench as the bulbs tend to support one another. The rows are from 18 to 36 inches apart, depending on your method of cultivation,—by hand or machine. Allow about five inches between large bulbs and less for smaller sizes.

As we previously stated, stable manure, well rotted, will give you the finest results but for larger plantings, it is often necessary to resort to a commercial fertilizer. Here, at Flying Cloud Farms, we have found that either Vigoro or Agrico supply the needed elements and have given us excellent results.

To prepare your rows for planting, loosen the soil well to at least an inch lower than you intend to plant your bulbs. Use about four pounds of fertilizer to 100 feet and work it well into the bottom of the trench,—then let it stand a day or two. When the bulbs are set in the trench, cover and hill up a bit. As small weeds appear, rake down level again and that first crop of weeds is killed. When the glads are eight to ten inches high, a surface feeding is advised at the rate of four pounds to 100 feet of row. This should be scattered on both sides of the row and worked lightly into the soil. A similar feeding should be applied as the buds appear.

Water is so necessary and your glads should have a good soaking once a week. If it has to be by irrigation be sure the ground is well soaked for at least three-quarters of an inch. As the spikes begin to break through the sheath, they greatly need the water.

Cultivation is very important. We use lawn brooms in the planted rows on our light soil and cultivators between the rows, but hoeing, scratching, brooming, or whatever method of cultivation you use, must be done often,—about every fifth day. If it rains, or we irrigate, we try to cultivate as soon as it dries out.

We guarantee our bulbs to be absolutely free of thrips or disease when we ship them but advise you to dip them nevertheless. We **soak** our bulbs, as we plant them, in **Bichloride of Mercury** (Corrosive Sublimate) from **8 to 10 hours** in a solution of **one ounce to seven gallons of warm water**. This prescribed time is for bulbs with the husks on. If you peel the bulbs, six to eight hours is sufficient. For this dip, **wooden, glass, or crockery** containers **must be used** as metal causes a chemical reaction. The **Lysol dip** is also very widely used: **1 tablespoon to 1 gallon of water, soaking the bulbs four to eight hours**, depending upon whether the bulbs are husked or not. We advise planting before the bulbs have dried out, when using either of the above mentioned dips.

A new and effective dip is the **New Improved Ceresan**: **one ounce of this and 3 teaspoons Grasselli Spreader Sticker to 3 gallons of water**. For large quantities: **½ lb. N. I. Ceresan and 5 teaspoons Grasselli Spreader Sticker to 25 gallons water**. With this treatment the bulbs only have to **soak fifteen to 30 minutes** but the solution should not be allowed to settle. The Ceresan treatment is so much shorter it will probably become more popular but you **must** plant the dipped bulbs the same day.

As your glads grow, do watch for any signs of thrips. It is advisable to spray them when the growth is about six inches high as thrips are hard to distinguish and a few at this stage in the growth of your glads would multiply enough to make serious damage later. As a **spray**, we have used **Tartar Emetic** very successfully. The formula is: **4 pounds Tartar Emetic, 16 pounds brown sugar, to 100 gallons of water**. For home gardens use: **1 gallon of water, 1½ teaspoons Tartar Emetic, and 9 tablespoons (½ cup plus 1 tablespoon) brown sugar or molasses**.

Dusting with DDT powder, 5%, while the leaves are still moist, is the most recent suggestion and we have found it to be very satisfactory. Any type of dust application—with favorable conditions—is more easily applied.

Digging may be done any time from four to six weeks after a variety has stopped blooming. Be sure to cut the tops off close to the bulb and spread the bulbs out in low boxes to dry, preferably where air can move around them. Your drying conditions will determine how soon the bulbs can be cleaned (the **old** bulb should come off easily and be destroyed). Now store in a cool dry place. If you use naphthalene flakes, we suggest that you put half a handful on a paper in each box, then stack your boxes and **cover** to keep the fumes confined. If this treatment is carried out where the temperature is not too cool, the thrips (if there are any) will be more active and the naphthalene will take effect more quickly and thoroughly. Leave them two weeks at least and then uncover, take out the naphthalene, and **store** your bulbs, as suggested, for the winter.

SHIPMENT

We ship by either parcel post or express, which ever we think best and cheapest or safest at the time shipment is desired, so if your express office is different from your mail address be sure to state it on the order. Fairly heavy orders are usually cheaper by express. Where you ask for "immediate" or "at once" shipments, we will endeavor to carry your suggestions out, weather permitting, but please be patient as many times our weather conditions here vary so greatly with weather conditions on the other end. We are equipped to store your orders until you wish them in the spring and we guarantee safe delivery of all shipments.

When you receive your order, **open the package at once** and allow the air to get to the bulbs. If there are only a few in each bag, open the top and stand the bag up in a box. If there are many bulbs, it is advisable to pour them out, each variety in a separate shallow box. Now store them, as we have previously suggested, in a cool dry place until planting time.

SUBSTITUTION

In no case will any other variety be substituted for the variety ordered except with your permission on orders received prior to April 1. However, if you order later than this, please give us a few suggestions for second choice or permit us to send more of those available on the order to make up the value. All orders are put up and put aside in the order received regardless of the shipping date. **No orders accepted after May 15, except collections.**

BULBLETS

While we guarantee to satisfy our customers, **it is not possible for us to guarantee the germination of bulblets.** Some varieties are hard to germinate and need good care to get the best results. We want our customers to be sure they understand clearly that they must not expect us to replace them if they do not germinate. Of course a big percent usually will grow but if they are valuable ones, and are cracked before planting, and then kept well watered, the per cent that will grow will be much increased. We will always select the largest bulblet available of the ordered variety.

TERMS

The day an order is received we mail you a card or letter of acknowledgement. If this does not arrive promptly please let us know. We may be able to trace it then but if we do not know about it for a couple of months it is hopeless. Please, if you send cash with an order, register the letter as we do not feel we can assume this risk.

It is our custom to add extras to each order,—the amount and varieties vary with the size of the order. Some customers already have a wide selection of varieties and prefer the extras in overcount of the ordered varieties, or have some varieties in mind that they might like to try and, while of course we cannot always send all the varieties that are mentioned, it will help us to have a list to select from so we may send something you really want. Just put on the order what you would prefer to have us do,—increase the count, take them from your list, or select them ourselves.

If one is willing to pay the transportation charges on an order, we will see that there are bulbs of a value much larger than the shipping cost added to the order to offset these charges. Here again, just give us an idea of what you would like and we will do our best.

Please do not ask us to accept an order for less than \$2.00, which must be accompanied by cash in full, and no single item for less than ten cents. On orders of \$5.00 and up we will accept 25% with the order, balance before shipment. We will prepay all orders to any point in the United States or Canada except any request wholesale orders. Foreign orders, except Canada and Mexico, must be accompanied by money order or draft and shipping charges. To our Canadian customers, may we suggest that you secure a permit from your Dept. of Agriculture before ordering.

WHOLESALE

We are not including a general wholesale list this year but if you are interested in larger quantities we may be able to supply you upon request.

BULB DISCOUNTS

Cash Orders for \$3.00 to \$5.00 select 10% additional stock.

Cash Orders for \$5.00 to \$25.00 select 15% additional stock.

Cash Orders for \$25.00 or over select 20% additional stock.

Discount privileges, for additional stock only, are for cash with order. These discounts do not apply to wholesale orders, the collection, or varieties marked "No Discount." These extras to be selected from the retail list. Where bulbs, not bulblets, are priced each, ten bulbs of a variety will be sold at eight times the single price; five bulbs or more at the ten rate, except on varieties marked "No Discount." Large bulbs will be 1¼" up, medium will be ¾" up, and small will be ⅜" up. As long as available, the larger bulbs of each grade will be used.

We shall personally see that full value is given to every customer. If you are not pleased with the stock when received, or if, after you have grown it, you are not satisfied with the results, please let us know and we will make every effort possible to please you. All stock is guaranteed true to name and free from disease.

NEW INTRODUCTIONS

BETTY DUNCAN (Benedict)—Beautiful orange, blending to a clear golden throat. Does not burn or bleach in the sun. Spike 57 inches; 4¼" floret; 16 buds; up to 7 open. Bulblet production and germination good. Even large bulbs produce many bulblets. Award of Merit - N.E.G.S. - Score 87¾. **1 large bulb and 10 bulblets \$5.00 No Discount.**

GEORG BARTH (A. Barth)—A true exhibition variety of luminous clear old gold. Mr. Barth himself describes it as a "second Picardy except in color" and it seems quite accurate as it even has the Picardy type throat. Really a fine glad. **Large \$5.00, Medium \$4.00. No Discount**

ORANGETOWN (Cassebeer)—Very pretty butterfly-type decorative. A distinctive bright lively orange color that blends well in any arrangement. **Large \$1.00 each, Blts. 10—\$1.00. No Discount.**
